

Improving Healthcare International Convention

Technology as an Enabler for Connected Care

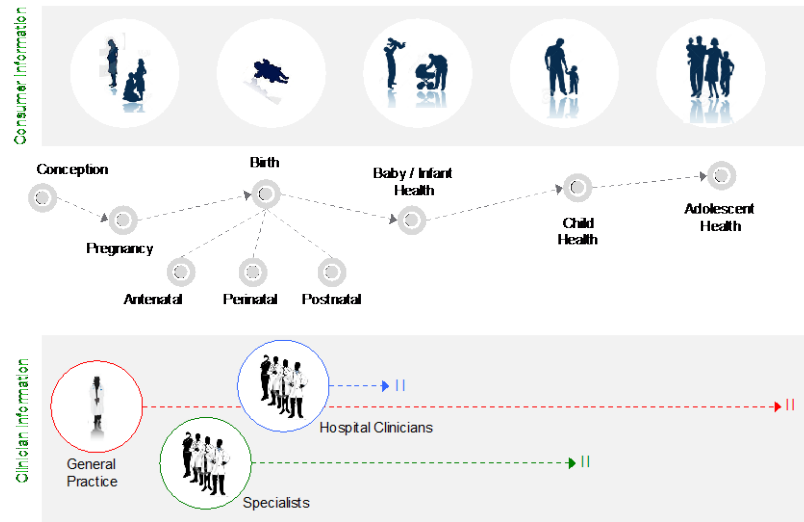

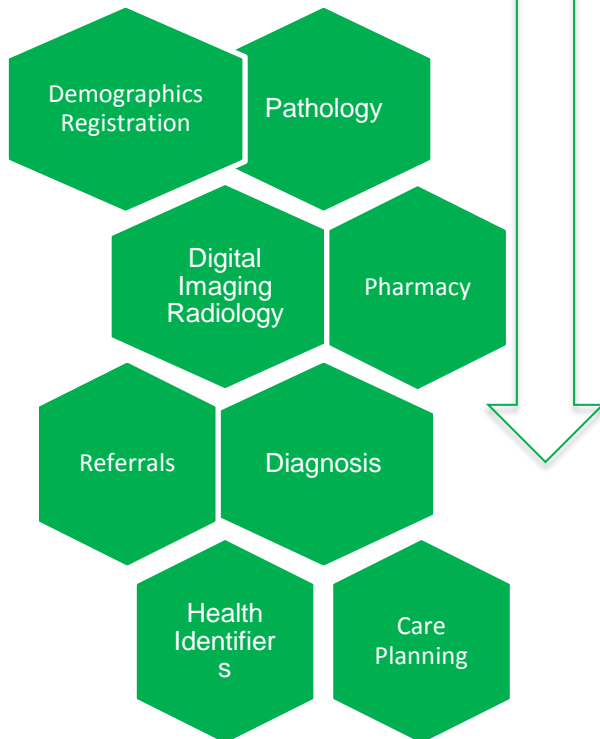

Patient Journeys are complex, best future choices are dependent on the richness of previous observations and events

Technology with a Purpose Connected Care Solutions a combination of careful choices.

Depth of Products / Function

Breadth of Product / Solutions

Connecting Care, Concurrent Problem Solving at Multiple Levels

EASIER FOR PATIENTS

- A system that knows who you are
- Empowering consumers to take a greater role in their own healthcare
- Captures what has happened and plans what will happen

SUPPORTS CLINICIANS

- Provides them the tools to do their job
- Gives seamless access to the right information to support the best care
- Supports quality processes and review

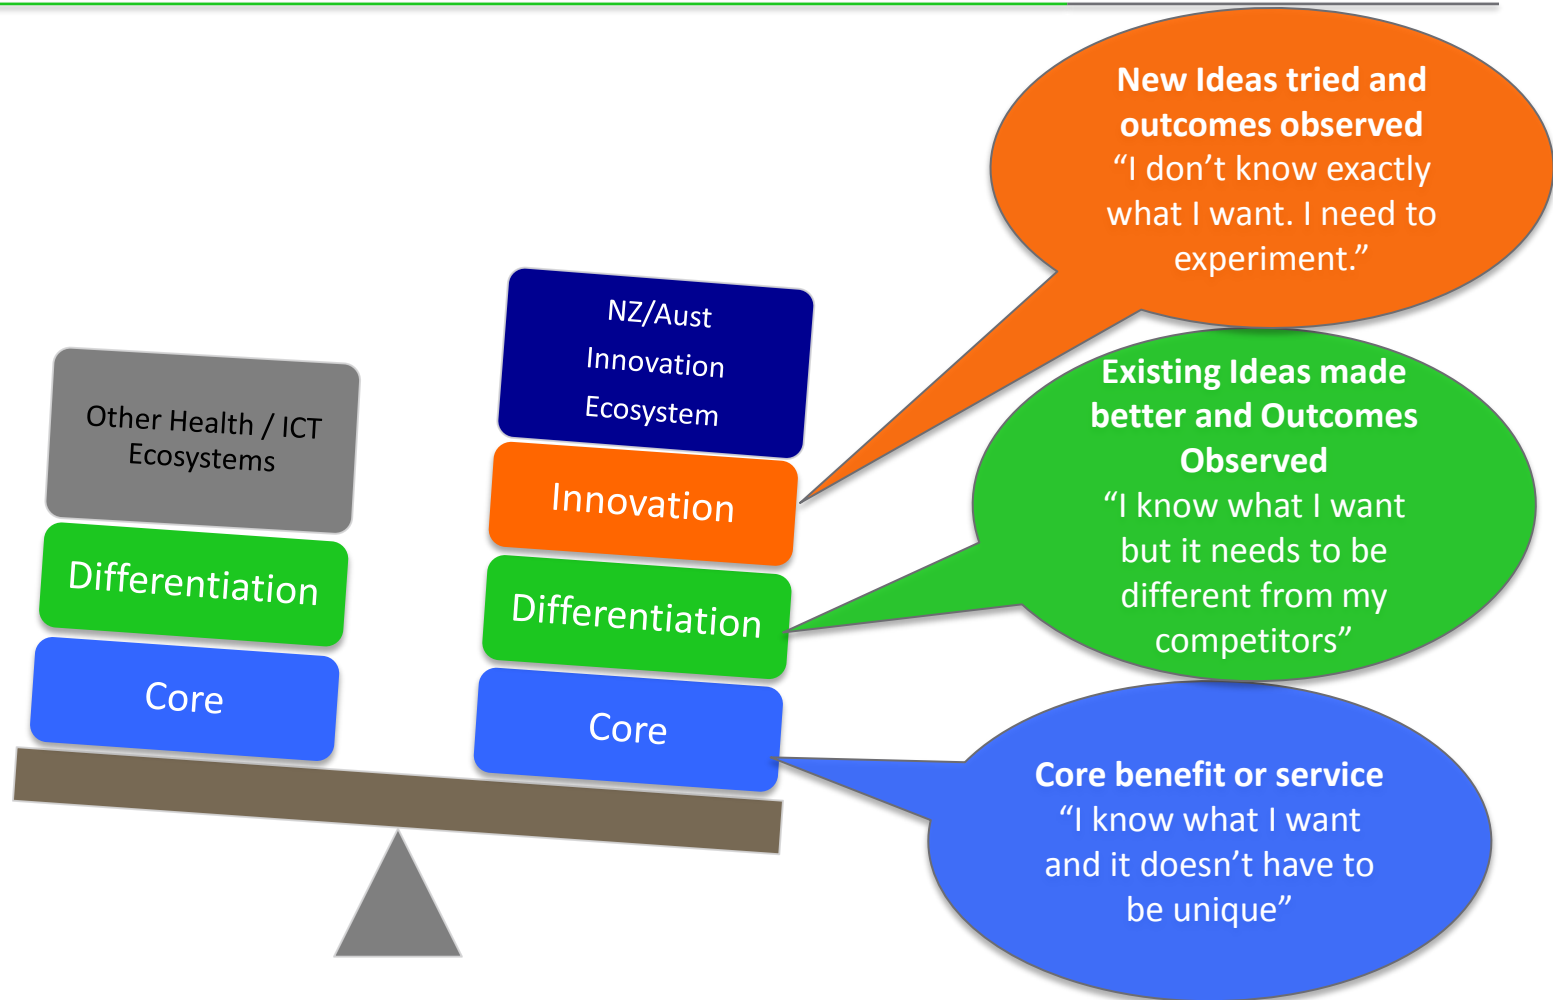

ENABLES SYSTEM CHANGE & REFORM

- Increasing demand for services
- Increasing chronic disease and aging population
- Funding growth
- Favours **Micro** rather than **Macro** reform

ICT Ecosystems that Favours Innovation

Technology Enabled Connected Care allows us to re-engineer the care deliver pathway

1. **“Mobile Monitoring”**... breaks the physical connection between hospitals, patients, monitors and diagnostic capabilities.
2. **“Body- Area Networks”**...wearable technology that allows development of real time response to symptoms rather than test and see
3. **“Cloud Integration of ICT families”**... means the ability to bring together more easily, hospital, Community, personal and third party systems, we are no longer dependent on single system functionality, or Geographically limited LAN / WAN integration
4. **For Healthcare systems**, this means Clinicians and Consumers can have more **Informed Choices**, have greater **flexibility** on where they can **Access** care, better integration of **Clinician Advice and Consumer Behaviours** and support new **More Effective Models of Care**
